My Creative Skills & Experiences

I'm studying Bachelor's in Computer Science at FAST National University which is considered to be one of the best universities in the Computer (IT) field. I've learned many technical skills in my degree program along with the projects. So I've already gained some experience and hands-on practice in doing these projects. Management courses helped me a lot to groom my personality and soft skills. I've also self-learned some technical and non-technical skills which motivated me and boosted my interest in my field.
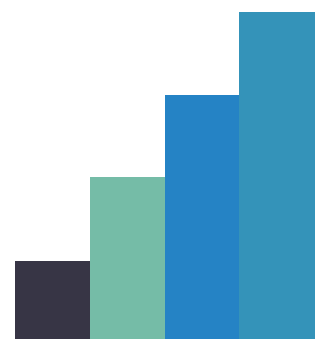

I've learned different Languages such as;
1) Programming Languages (C, C++, Python, Java, NASM)
2) Front End (HTML, CSS)
3) Back End (JavaScript, PHP, jQuery)
4) Database (MySQL, Mongo DB)

My top skills include AWS, Web Development, and Digital Marketing. I've hands-on experience in all of these fields.

In Web Development I have experience of 1 year. I've done many projects on Web development which includes university-based projects and client-based projects.
As an AWS Solution Architect, I provided my services to different clients such as migrating data to the cloud, building a cost-efficient scalable cloud environment, and many more. I've experience of 6 months.

I am a member of the Google Developer Society which helped me a lot to polish my technical and non-technical skills and learn new things.
I also run a company named Falmin Enterprises. I boost my sales through digital marketing and email marketing. Through this, I got experience in digital marketing as well. The

company has 3 shareholders who also contribute to marketing and other fields. I've learned to work and coordinate with them as a team.

Life is all about gaining experience, everyone gains experience from in almost every phase of life
